## Servo drive and servo motor selection brochure

### — AC Servo Driver & Servo Motor —

### ESS200P series synchronous servo drive

# About us

## Company introduction

Shenzhen Encom Electric Technologies CO., LTD is a state-level high-tech enterprise with independent intellectual property rights, focusing on industrial automation products' development, production and sales. The main products include frequency inverter/ac drive, servo controller, PLC, new energy systems.

ENC company was established in 2004, has passed ISO9001: 2008 quality management system certification and the European Union CE certification, won the National Innovation Fund, the Shenzhen strategic emerging industries fund, product innovation award, the most investment value award and repeatedly won "China top ten low-voltage inverter domestic brands" title.

1. Won National Innovation Fund enterprise, China's high-tech enterprise
2. Repeatedly won "China top ten domestic brands" title
3. With more than 13 years of rich experience R&D team
4. With completely independent intellectual property rights, has dozens of patents
5. Master the world's leading asynchronous, synchronous vector control technology and torque control technology
6. ISO9001:2008 system certification unit, strict and standard information quality control system
7. Has more than 30 offices in China
8. ENC provide quality products and services for more than 30 countries' industrial user

## ENC Servo ESS200P series products Overview

### Application Fields

Medical equipment, rubber tires, food machinery, textile machinery, printing & packaging, semiconductor production, fine engraving machine, 3D printing, lithium electrical manufacturing, precision welding, paper making, printing and painting equipment, industrial robot and various testing equipments.

### performance

- 1KHZ: Response Frequency 1KHZ
- Low cogging torque of motor
- The resolution of motor encoder can reach 2^23 Pulse each cycle
- Max. Input pulses frequency 4MHZ
- Max. overload capability of the motor: 3 times
- The resolution of analog command: 12bit

### Intelligent

- Motor parameters self-learning
- Load inertia self-learning
- Manual/Automatic notch filter
- Encoder self-learning
- PI parameters auto-tuning via one key
- Manual/Automatic Low frequency vibration suppression
- Excellent position feed-forward algorithm

### Safety

- Protection level of servo motor is IP65/67
- Perfect hardware and software protection and fault detection
- Conform to the requirements of CE certification

### Utility

- Gain switch
- Origin return function
- Torque limit switchover function
- Brake energy processing function
- Allocation function of input and output signal
- Abundant encoder type
- Compensation function for gravity load
- Abundant motor type for selecting
- Powerful upper device debugging software
- Parameters copy and download function

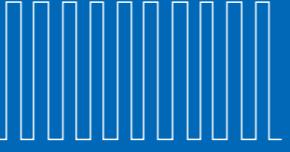

### functions

- Double PG full closed loop application
- Interrupted type position control
- The resolution of motor encoder can reach 2^23 Pulse each cycle
- Max. Input pulses frequency 4MHZ
- Encoder adopts two-in-one design which supports 2500 lines incremental and 23 bit bus type encoder

# ENC Servo ESS200P series products features

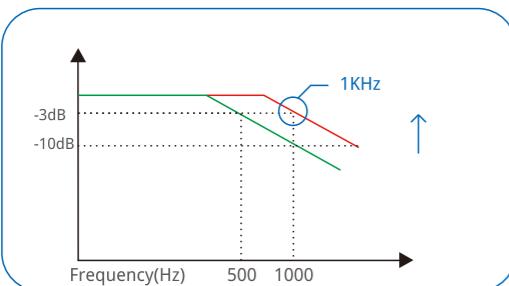

## Performance

It has very quick action, fast response and high precision locating advantages. With proprietary intellectual property rights excellent algorithms matching high performance motors, it can meet the high requirements of various industrial sites.

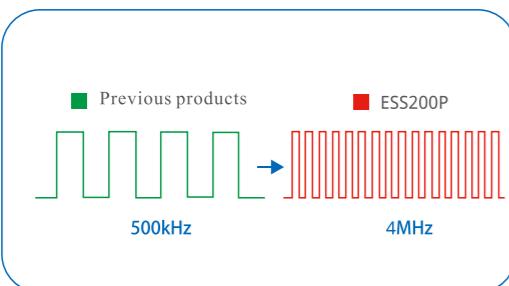

### Response Frequency 1KHZ

Bandwidth response frequency of velocity loop can reach 1KHZ

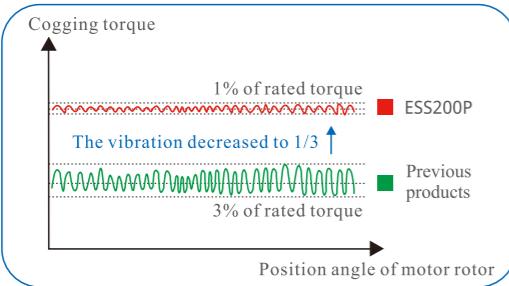

### Max. input command pulses 4MHZ

Max. input command pulses can reach 4MHZ

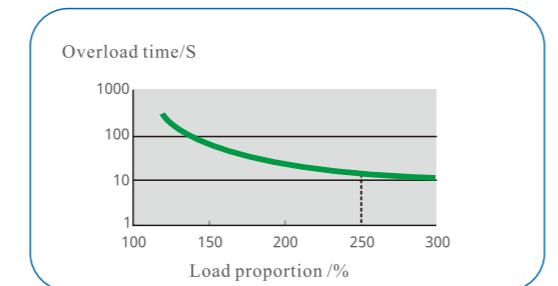

### Low cogging torque of servo motor

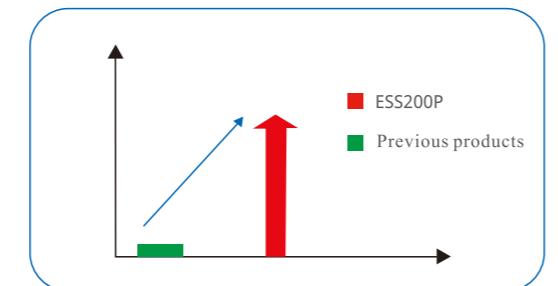

Best collaboration of motor poles and slot

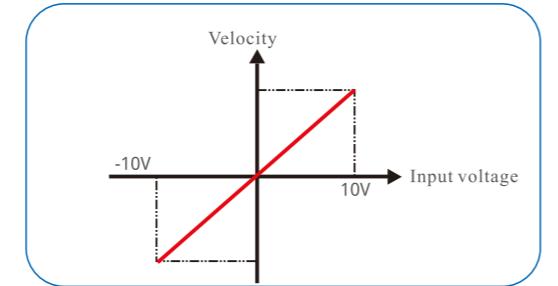

### Max. overload capability of the motor: 3 times

### The resolution of motor encoder can reach $2^{23}$ Pulses each cycle

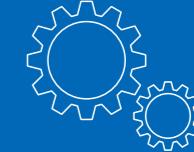

### The resolution of analog command: 12bit

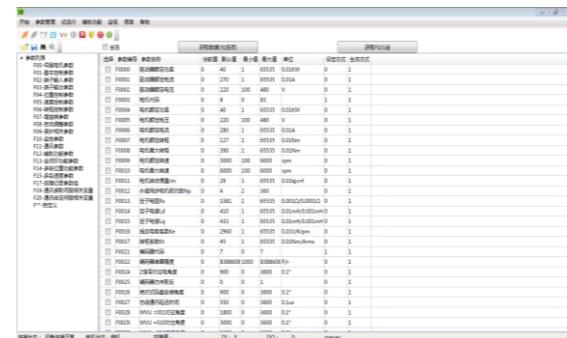

## Powerful application PC software

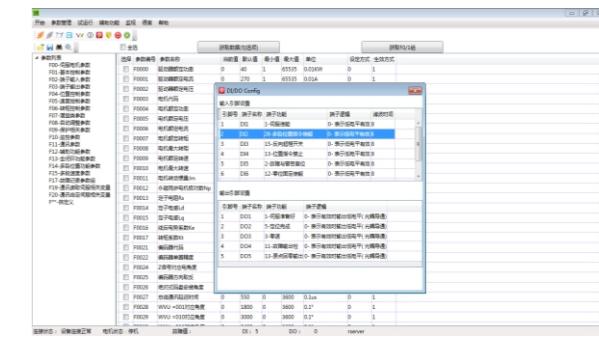

Background monitoring and debugging software has continuous sampling mode oscilloscope and can monitor DI/DO. It makes problems determination and products adjusting more convenient and intelligent. (Please explore [www.encvfd.com](http://www.encvfd.com) and download the software)

### Convenient to read/write motor parameters

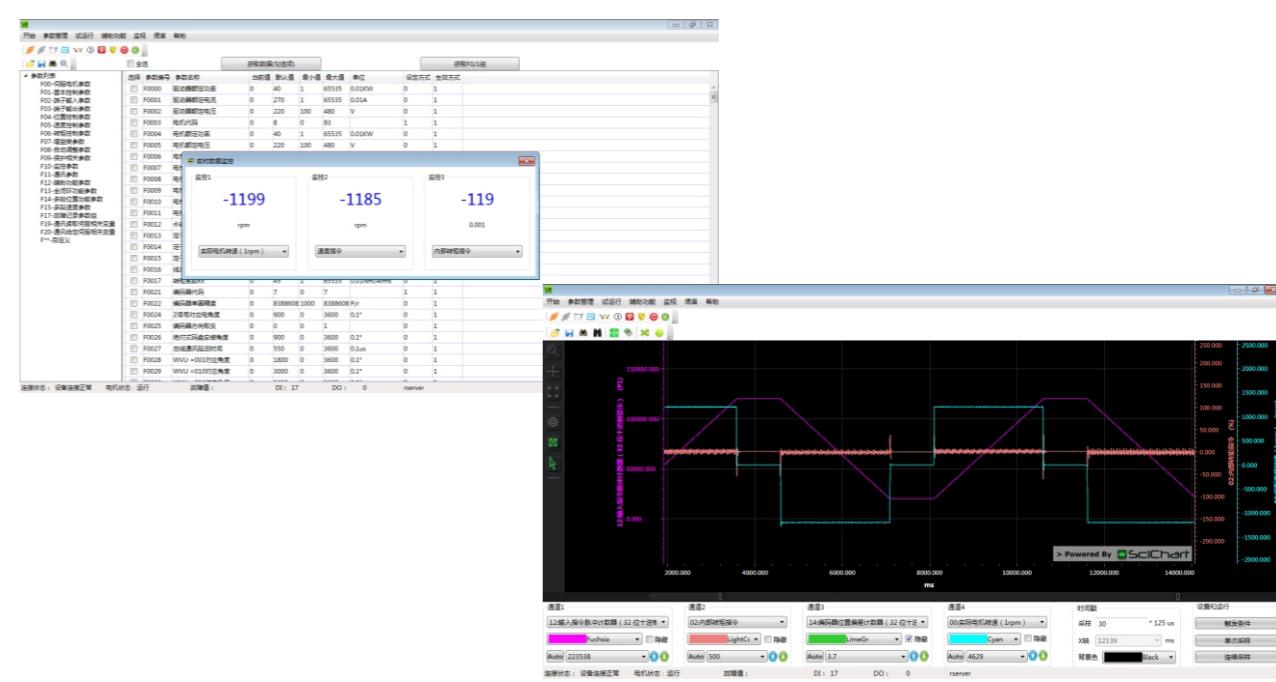

### Convenient parameters setup

### Multitask real-time oscilloscope

Multitask real-time oscilloscope makes adjusting more convenient

# ENC Servo ESS200P series products features

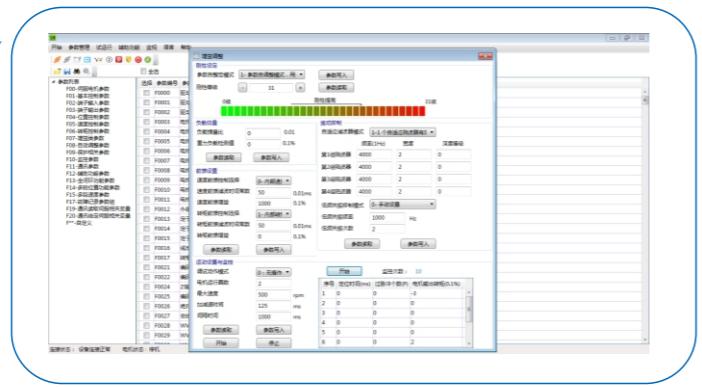

## Intelligent

It avoids the complex parameter debugging of traditional products. Self-calculation and identification according to different loads used by users, and adjusting the system inertia, notch filter, rigidity and other parameters via one key so that the equipment always operate in the optimal state.

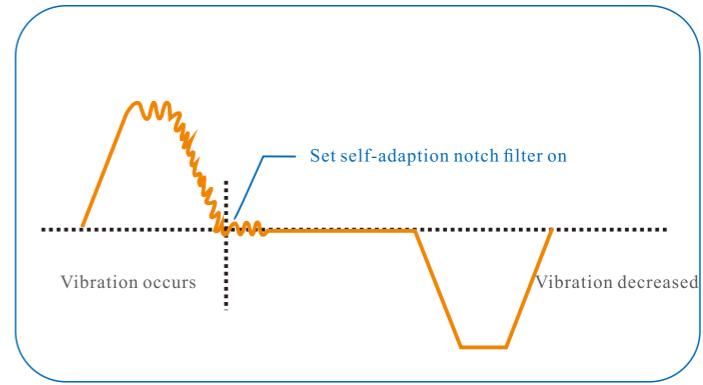

### Parameters auto-tuning via one key

The gain of velocity loop and position loop can be adjusted automatically by adjusting the single rigidity level parameter. For different mechanical equipment, the difficulty of gain debugging greatly reduced by setup corresponding rigidity level in advance.

### Manual/Automatic notch filter

4 notch filters are provided with 100 ~ 4000Hz range setup frequency for each filter and the depth and width can be adjusted. 2 of them can automatically detect and set the vibration frequency and depth. It greatly reduces the vibration and noise which caused by the mechanical resonance of devices to realize rapid response actions.

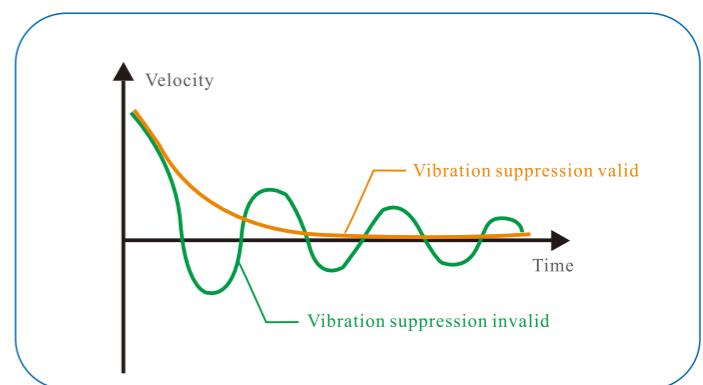

### Load inertia self-learning

With inertial identification function, most of the system gain parameters can reach optimal state. It greatly reduces the system debugging time.

### Manual/Automatic vibration suppression at low frequency

The low frequency vibration suppression algorithm can effectively overcome the mechanical resonance at low frequency and the shimmy phenomenon of end for long swinging arm mechanism, so as to shorten the finish time of mechanical positioning significantly and reduce the defective rate during product processing which caused by vibration. The vibration frequency and the number of vibration times can be obtained automatically to restrain the vibration at low frequency. This method reduces the difficulty of debugging by user.

### Motor parameters self-learning

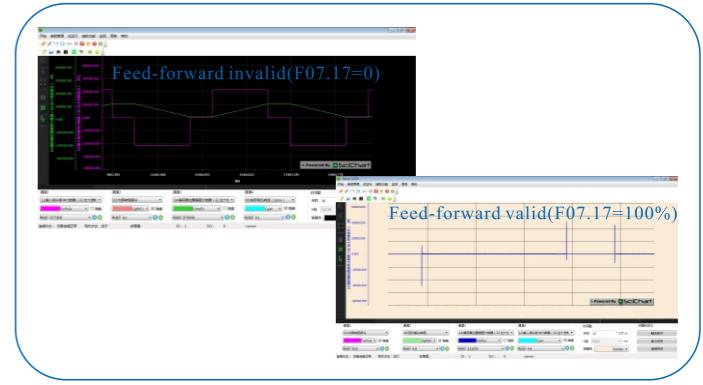

The optimal current loop response can be guaranteed by self-learning of motor resistance, inductance, torque coefficient and so on. At the same time, it is also convenient for Servo Drive to adapt to other brands motor.

### Encoder self-learning

The self-learning of encoder installation information greatly alleviates the user's installation and maintenance work of encoder. It is also convenient for the Servo Drive to adapt to encoder of other brands motor.

### Excellent position feed-forward algorithm

Excellent position feed-forward trajectory tracking algorithm ensures the minimum position deviation in the process of localization so as to meets the harsh application areas.

## ENC Servo ESS200P series products features

### Safety & Utility

Servo Drive has perfect protection function. Conforming to national safety standards, it's safe and reliable to use. Combined with the actual requirements of users, it has simple parameters setup, abundant application functions and more considerate debugging.

### Servo motor protection level is IP65/67

Standard oil seal design, up to IP67 protection level can meets harsh application areas

### Perfect hardware and software protection and fault detection

Overcurrent, overvoltage, undervoltage, short circuit to ground, input loss phase, overheating, Servo Drive overload, motor overload, speeding, encoder fault, too large position deviation, etc

### Gain switchover

The two sets of gains can be switched according to different conditions, which can shorten the positioning time and reduce the vibration for better results.

### Torque limit switchover function

Torque limit switching via I/O for simple pressure, tension control applications, etc.

### Allocation function of input and output signal

Allocating general 8-channel input and 5-channel output through setting parameters. The background software has a dedicated interface, making setting easier and faster.

### Compensation function for gravity load

Gravity load one-button self-learning, more stably control Z-axis.

### Parameter copy and download function

copying and downloading parameters through optional parameter copy keyboard, quickly realize parameter setting of multiple servo drives.

## Abundant application features of ENC servo product

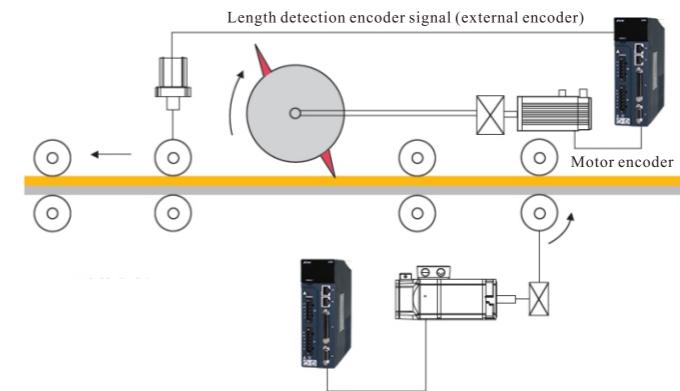

### Dual PG full closed loop control

#### Function description:

In simple terms, in practical application, the servo drive can be equipped with two encoders, one for speed closed loop control on the motor shaft, and the other encoder mounted on the speed detector to feed back the actual position of the material, and the servo drive performs position closed-loop control according to the pulse signal sent to it to ensure that the material is accurately and smoothly sent to the preset position. It effectively prevents the belt from slipping and various problems caused by the mechanical transmission gap. The dual PG full-closed control function of the ESS200P is implemented by an internal algorithm. The speed and position control smoothness during material transfer are adjusted by the built-in filter of the drive, and there is a speeding protection function when the position difference between the inner and outer loop is large, so as to ensure the feeding process smooth and accurate, and meet the needs of various production processes. In addition, the mechanical deviation value can also be detected.

#### For example:

Steel plate shearing machine, pipe bending machine, wire stripping machine

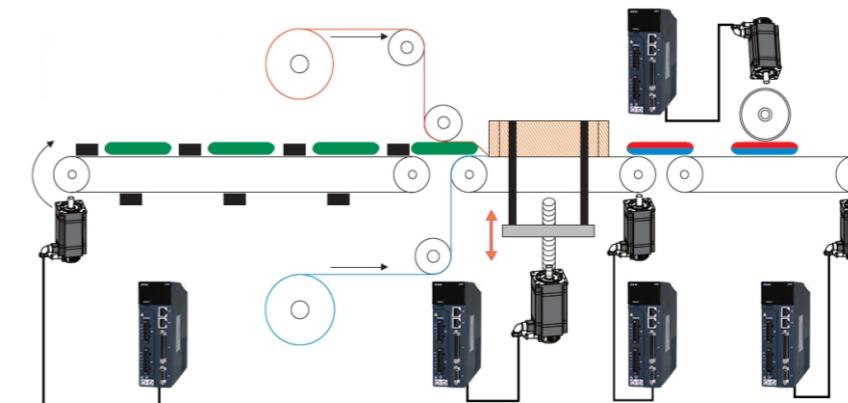

### Internal multi-segment position control

#### Function description:

If without upper computer sending pulse signals, the ESS200P can control the position by the number of pulses set in the servo drive. In the application, different built-in position commands, relative positions or absolute positions can be selected by different combinations of input terminals. It is also possible to preset multiple sets of position signals for the internal function code of the drive via upper computer communication or manual input, and can select up to 16 segments of position control at one time. It can simplify the design of the upper computer. During the execution of the multi-segment position, each segment is executed with a position arrival signal output, which is convenient for the upper computer to judge.

#### For example:

longitudinal cutting machine, multi-station switching mechanism, servo tool holder

## ESS200P Matching Servo Motor Product Overview

### 40 base servo motor

### 60 base servo motor

### 80 base servo motor

### 90 base servo motor

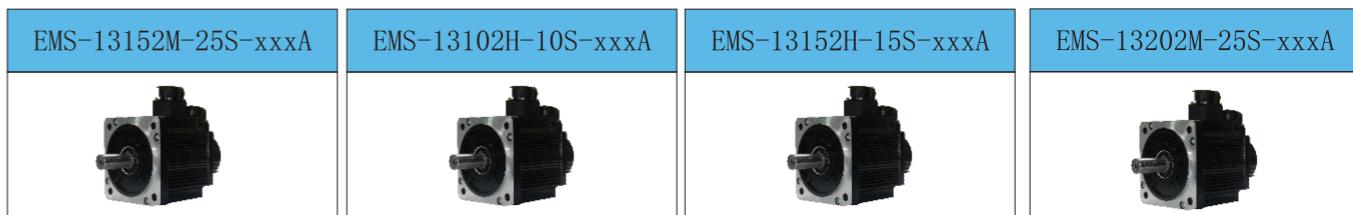

### 110 base servo motor

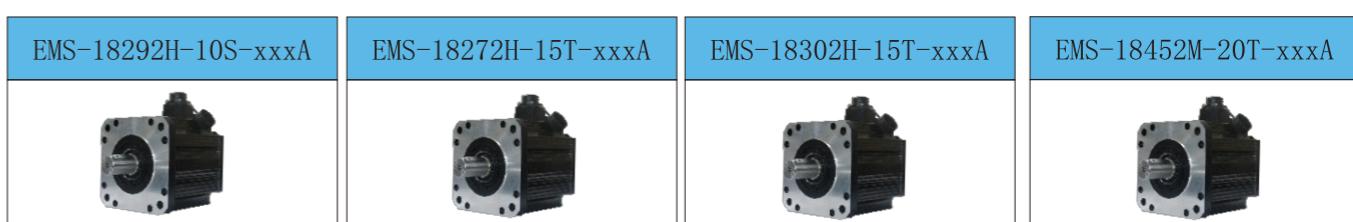

### 150 base servo motor

### 130 base servo motor

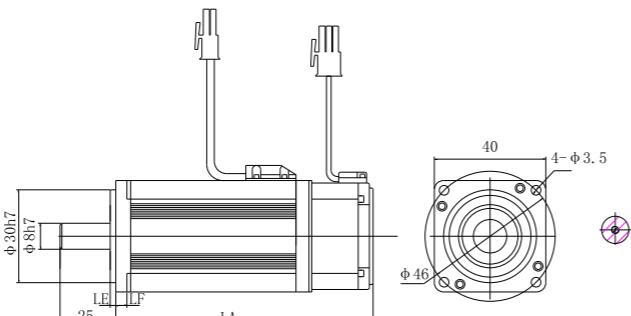

### 180 base servo motor

# ESS200P Matching Servo Motor Product Overview

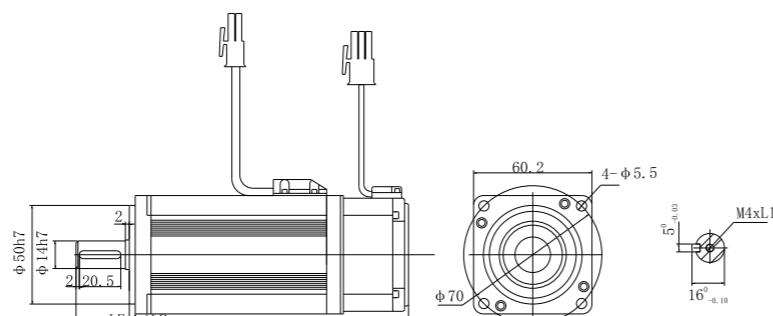

## 40 base servo motor parameters and installation dimensions

| Model               |        |        |                    |
|---------------------|--------|--------|--------------------|
| LE(mm)              | LF(mm) | LA(mm) | LA (mm) with brake |
| EMS-04101L-30S-xxxA |        |        |                    |
| 3                   | 6      | 90     | 124                |

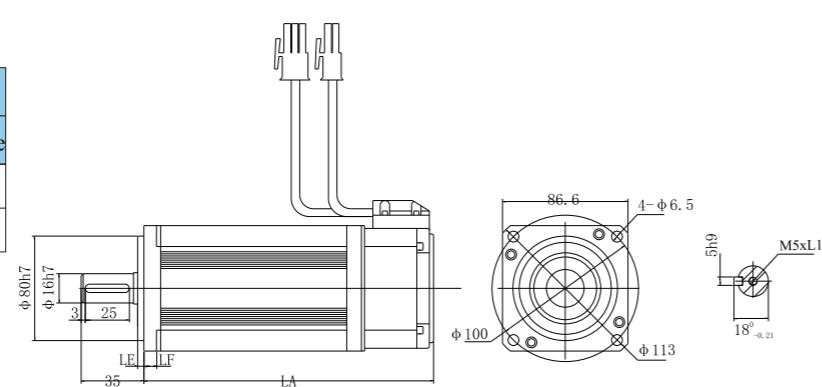

## 60 base servo motor parameters and installation dimensions

| Model               |        |        |                    |
|---------------------|--------|--------|--------------------|
| LE(mm)              | LF(mm) | LA(mm) | LA (mm) with brake |
| EMS-06201L-30S-xxxA |        |        |                    |
| 3                   | 7.5    | 116    | 164                |
| EMS-06201M-30S-xxxA |        |        |                    |
| 3                   | 7      | 109    | 157                |
| EMS-06401L-30S-xxxA |        |        |                    |
| 3                   | 7.5    | 141    | 189                |
| EMS-06401M-30S-xxxA |        |        |                    |
| 3                   | 7      | 133    | 181                |

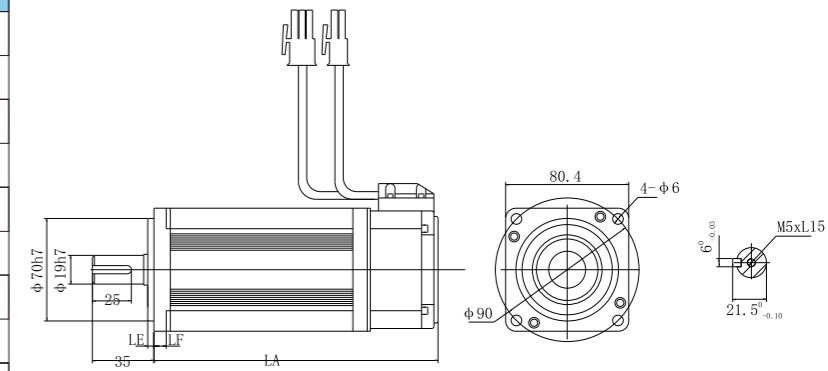

## 90 base servo motor parameters and installation dimensions

| Model               |        |        |                    |
|---------------------|--------|--------|--------------------|
| LE(mm)              | LF(mm) | LA(mm) | LA (mm) with brake |
| EMS-09751H-30S-xxxA |        |        |                    |
| 3                   | 10     | 150    | 198                |

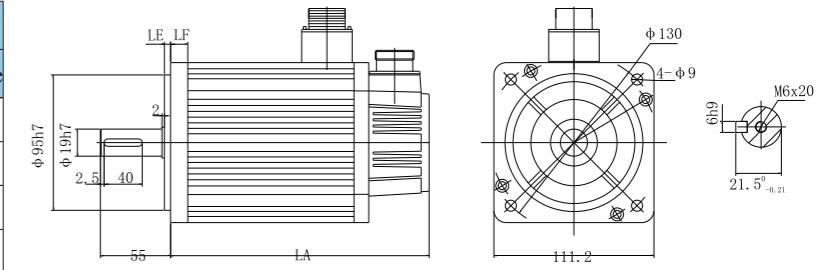

## 80 base servo motor parameters and installation dimensions

| Model               |        |        |                    |
|---------------------|--------|--------|--------------------|
| LE(mm)              | LF(mm) | LA(mm) | LA (mm) with brake |
| EMS-08401H-30S-xxxA |        |        |                    |
| 3                   | 8      | 124    | 166                |
| EMS-08731H-20S-xxxA |        |        |                    |
| 3                   | 8      | 179    | 221                |
| EMS-08751L-30S-xxxA |        |        |                    |
| 3                   | 8      | 151    | 193                |
| EMS-08102L-25S-xxxA |        |        |                    |
| 3                   | 8      | 191    | 233                |
| EMS-08122L-30S-xxxA |        |        |                    |
| 3                   | 8      | 191    | 233                |

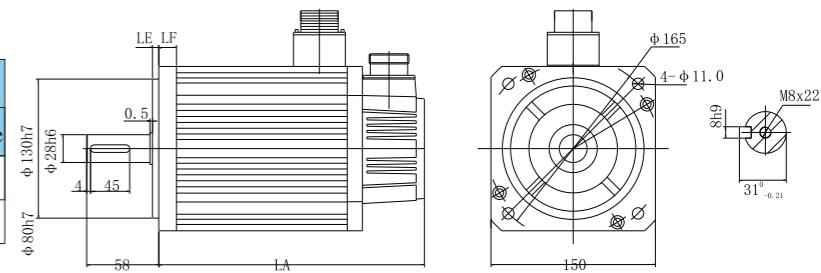

## 110 base servo motor parameters and installation dimensions

| Model               |        |        |                    |
|---------------------|--------|--------|--------------------|

## ESS200P servo driver wiring

### Drive terminal definition

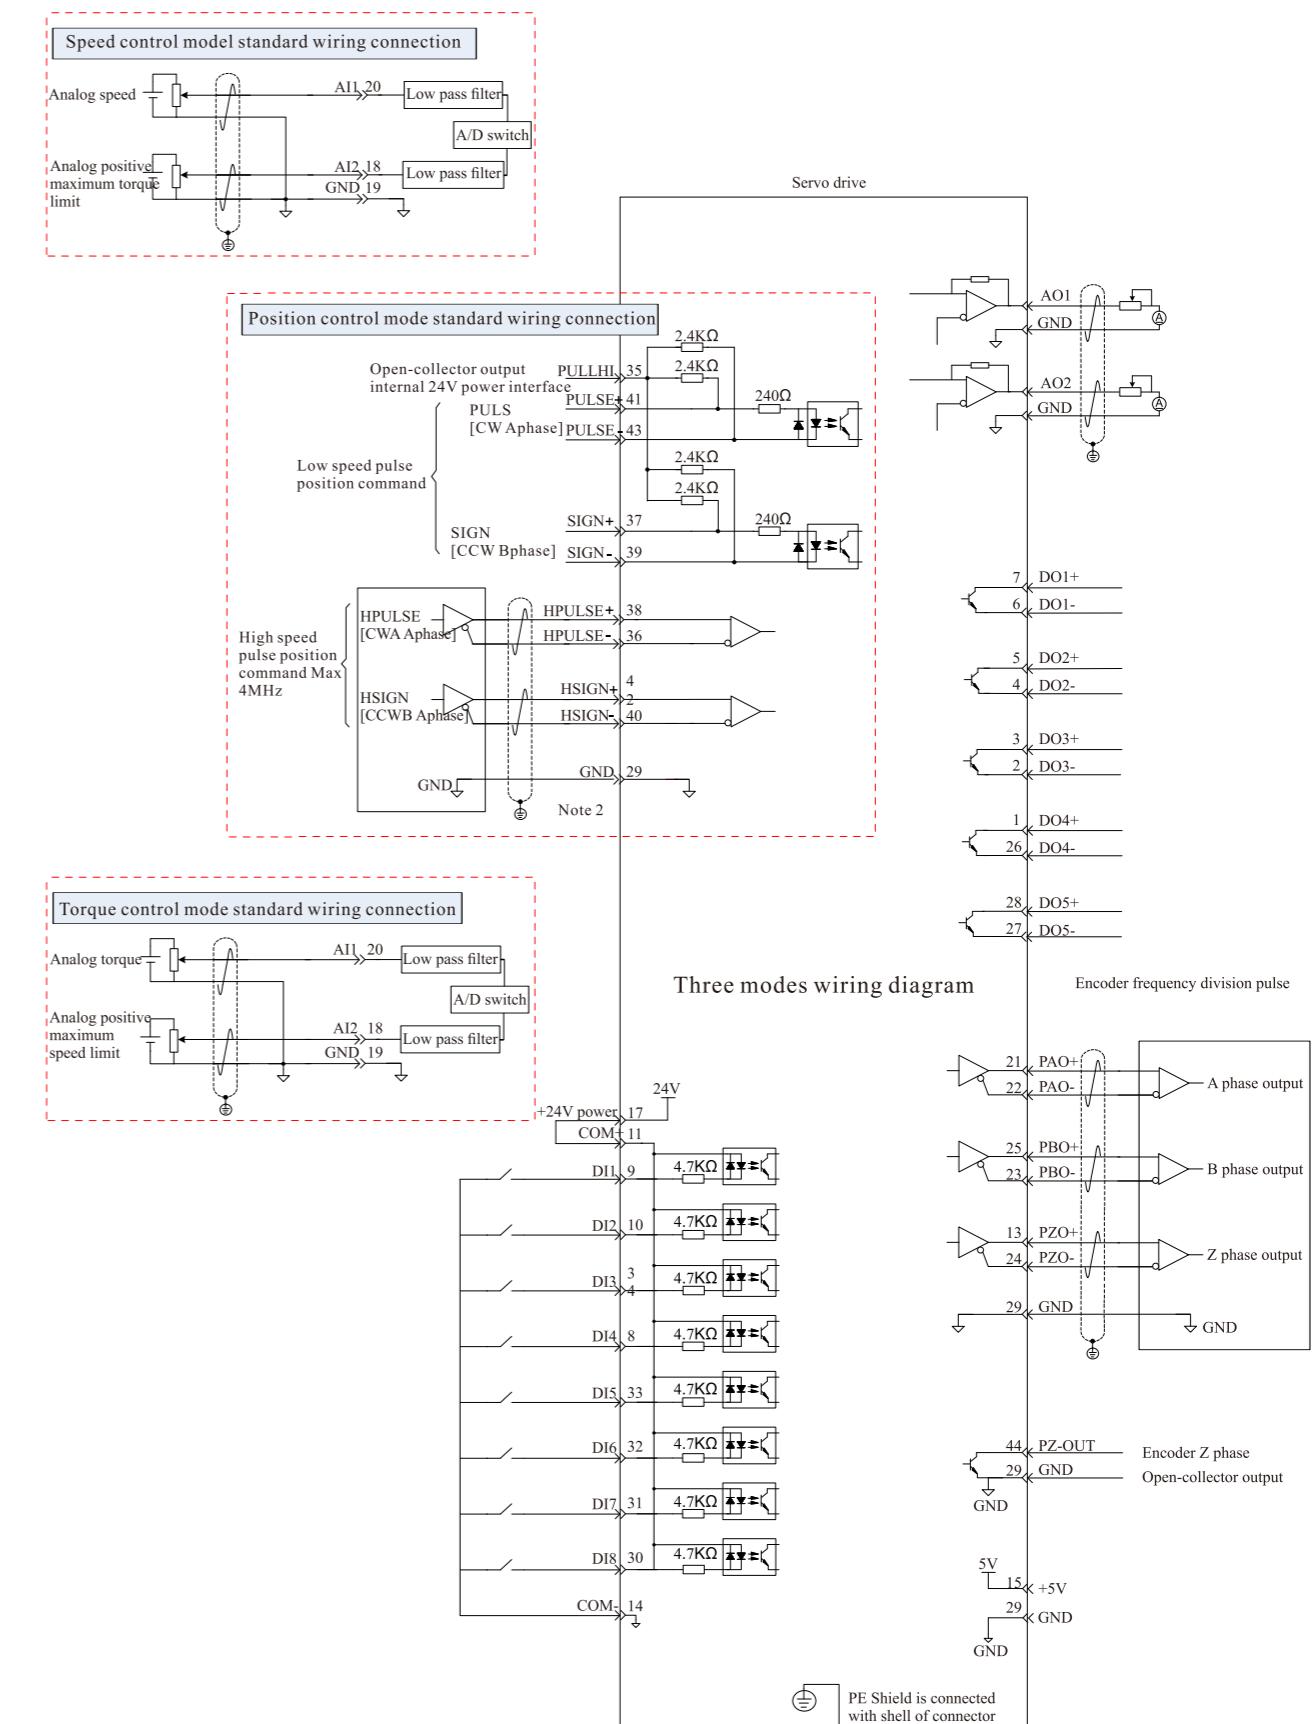

| Terminal mark | Terminal name   | Terminal functions  |
|---------------|---|---|
| L1□L2、 L3     | ESS200P : 2S101□2S201、 2S401、 2S751   | Main circuit single phase power input, could connect any two terminals (L1,L2,L3). Three phase 220V power supply connect L1,L2,L3. Connect AC220V power between L1 and L2.  |
|               | ESS200P : 2T102、 2T152、 2T202、 2T302  | Main circuit three phase 220V power input   |
|               | ESS200P : 4T102□4T152、 4T202、 4T302、 4T442、 4T552、 4T752                                    | Circuit three phase 380V power input  |
| L1C□L2C       | Control power input terminal  | Circuit power input, need to refer the rated voltage grade of nameplate   |
| RB□B、 (+)     | ESS200P : 2S101□2S201、 2S401  | When braking capacity is lacked, connect external brake resistor among (+) and B. Please purchase external brake resistor separately.   |
|               | ESS200P : 2S751□2T102、 2T152、 2T202、 2T302、 4T102、 4T152、 4T202、 4T302、 4T442、 4T552、 4T752 | By default, use short wires between RB and B. When braking capacity is lacked, please make an open circuit between RB and B(remove short wiring). And connect external brake resistor between RB and B. Please purchase external brake resistor separately. |
| (+)□(-)       | Common DC bus terminal  | Servo's DC bus terminal could realize common bus connection under multi-machine parallel running  |
| U、 V、 W       | Servo motor connecting terminals  | Servo motor connecting terminals is connected to U, V, W of motor.  |
| ⊕             | Ground  | Two ground terminals are connected with power ground terminal and motor ground terminal.  |

## ESS200P cable patch cord specification

| Cable name                     | Cable model | Cable length L (mm) | Cable appearance  |
|--------------------------------|-------------|---------------------|---|
| Servo motor main circuit cable | EN-D201     | 3m                  |    |
|                                |             | 5m                  |    |
|                                |             | 10m                 |    |
|                                | EN-D202     | 3m                  |    |
|                                |             | 5m                  |    |
|                                |             | 10m                 |    |
|                                | EN-D211     | 3m                  |    |
|                                |             | 5m                  |    |
|                                |             | 10m                 |  |
|                                | EN-D212     | 3m                  |   |
|                                |             | 5m                  |  |
|                                |             | 10m                 |  |
|                                | EN-D221     | 3m                  |  |
|                                |             | 5m                  |  |
|                                |             | 10m                 |  |
|                                | EN-D222     | 3m                  |  |
|                                |             | 5m                  |  |
|                                |             | 10m                 |  |
|                                | EN-D223     | 3m                  |  |
|                                |             | 5m                  |  |
|                                |             | 10m                 |  |
| Servo motor encoder cable      | EN-M601     | 3m                  |  |
|                                |             | 5m                  |  |
|                                |             | 10m                 |  |
|                                | EN-M611     | 3m                  |  |
|                                |             | 5m                  |  |
|                                |             | 10m                 |  |

## ESS200P cable patch cord specification

| Cable name  | Cable model | Cable length L (mm) | Cable appearance  |
|---|-------------|---------------------|---|
| Servo motor encoder cable                               | EN-602      | 3m                  |    |
|   |             | 5m                  |    |
|   |             | 10m                 |    |
|   | EN-612      | 3m                  |    |
|   |             | 5m                  |    |
|   |             | 10m                 |    |
| Servo drive multi-machine parallel cable                | EN-M401     | 300mm               |    |
| Servo drive CAN communication cable                     | EN-M402     | 2000mm              |    |
| Servo drive 485 communication cable                     | EN-M403     | 2000mm              |  |
| Servo drive terminal matched resistor                   | EN-M404     |                     |  |
| Servo drive PC 232 communication cable                  | EN-M701     | 3000mm              |  |
| Servo drive keyboard copy parameter communication cable | EN-M601     | 3000mm              |  |

## ESS200P Cable patch cord specification

Be sure to make the side shielded mesh layer of drive and motor to ground reliably, otherwise it will cause the drive to false alarm.

- Please do not connect cable to “reserve” terminal
- The length of the encoder cable needs to fully consider the voltage drop caused by the cable resistance and the signal attenuation caused by the distributed capacitance. It is recommended to use the UL2464 standard 26AWG or higher twisted-pair shielded cable within 10m cable length; for longer cables demand needs to be increased appropriately Cable diameter, details see following table:

| Cable size          | $\Omega /km$ | Allowed cable length(m) |
|---------------------|--------------|-------------------------|
| 26AWG( $0.13mm^2$ ) | 143          | 10.0                    |
| 25AWG( $0.15mm^2$ ) | 89.4         | 16.0                    |
| 24AWG( $0.21mm^2$ ) | 79.6         | 18.0                    |
| 23AWG( $0.26mm^2$ ) | 68.5         | 20.9                    |
| 22AWG( $0.32mm^2$ ) | 54.3         | 26.4                    |
